

Information Technology
Overview

Information technology at a glance

IN Vie is a standalone internet-based software system that helps **manage inventory restocking** within pharmacies. This is achieved through **synced IN Vie devices** located in **access-controlled** areas. All user-created data is encrypted and transmitted wirelessly through Apple iCloud services.

Hardware

- **Minimum:** iPhone 5s / iPad Air 2 / iPad Mini 4 / iPod Touch 6g

Connectivity

- Persistent internet connection
- Devices must be logged into the **same iCloud Drive** enabled **Apple ID**

Settings and specifications

- iOS 9.0 (preferably 9.2 or higher)
- Devices may be managed through the facility's **MDM** (mobile device management) platform
- Each device requires a dedicated USB power plug

Installation and updates

- All **hardware** will be provided in its **new** or **restored** state and set up by the facility's IT department
- In most cases, hardware includes 2-3 iPads and 1-2 iPod Touches
- IN Vie software is available for installation and updates through the Apple **App Store**
