

Inventory Management System

Reduce complexity and thrive

Compared to alternative systems

- ◆ **Perpetual** inventory **increases complexity**, requires **constant maintenance**, is **expensive** (carousels, smart shelving, med cabinets, etc.), and is **unnecessary** for most products (e.g., aspirin and other fast-movers). **INVue** serves same purpose and **addresses** restocking **inefficiencies** while **reducing** complexity and workload.

Try INVue on iPhone or iPad for free!

Download "INVue" from the App Store and inform invie@activehx.com

- ◆ **Standalone** system: **no interfaces** to set up or maintain, **painless** implementation, no interoperability downtimes to consider, **ideal** data and system **security**
- ◆ Often, **~20%** of your **products** constitute **~80%** of **spending**. A **perpetual** inventory **does not** effectively address **expensive low-par drugs** (chemo, biologicals, specialty drugs, etc.), which often have the most **financial impact**. Front-line **staff** are most **knowledgeable** of what products to **reorder**. **INVue empowers** your staff to make **more informed** reordering **decisions**.
